## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gundlach (# US 5560766) in view of Baettig et al. (# US 6320031).

Gundlach discloses an aqueous ink including an coloring matter a mixture of 0.1 to 3.5 wt.% of Acid Yellow 17 and 0.1 to 4 wt.% of Direct Yellow 132 (column: 3, line: 32-35); a humectant (column: 3, line: 53-60), a penetrant (surfactant) (column: 4, line: 44-50; column: 5, line: 30-40) and water (column: 3, line: 45-51).

Gundlach differ from the claim of the present invention is that the ink having chroma of at least about 108.5.

Baettig et al. teaches to get the high quality printed image, the ink having chroma of about 111.7 (see Table: 6).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition of Gundlach by the aforementioned teaching of Baettig et al. in order to have a high quality printed image.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gundlach et al. (# US 5776230) in view of Baettig et al. (# US 6320031).

Gundlach discloses an aqueous ink including an coloring matter a mixture of 0.5 to 8 wt.% of Acid Yellow 17 and 0.5 to 8 wt.% of Direct Yellow 132 (column: 8, line: 35-60); a humectant (non-water component) (column: 7, line: 1-5), a penetrant (column: 7, line: 10-20) and water (column: 6, line: 51-55).

Gundlach differ from the claim of the present invention is that the ink having chroma of at least about 108.5.

Baettig et al. teaches to get the high quality printed image, the ink having chroma of about 111.7 (see Table: 6).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition of Gundlach by the aforementioned teaching of Baettig et al. in order to have a high quality printed image.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gundlach et al. (# US 5788750) in view of Baettig et al. (# US 6320031).

Gundlach discloses an aqueous ink including an coloring matter a mixture of 0.5 to 15 wt.% of Acid Yellow 17 (column: 6, line: 60-65) and 0.5 to 15 wt.% of Direct Yellow 132 (column: 7, line: 1-5, 55-62) in acid form (column: 10, line: 1-20); a humectant (column: 6, line: 35-40), a penetrant (surfactant) (column: 11, line: 50-65 and water (column: 6, line: 19-24).

Gundlach differ from the claim of the present invention is that the ink having chroma of at least about 108.5.

Baettig et al. teaches to get the high quality printed image, the ink having chroma of about 111.7 (see Table: 6).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition of Gundlach by the aforementioned teaching of Baettig et al. in order to have a high quality printed image.
